- Access for one year to ISNCSCI elearning module at no cost
- Chance to win CUE-T kit
- Lunch will also be provided

REGISTER TO WIN!!!

We will raffle off one CUE-T Kit
(must be there to win)

ISNCSCI Course

Performing the 2019 Updated ISNCSCI Workshop

This workshop is designed for clinicians to learn the basic components and use of the current 2019 updated International Standards for Neurological Classification of Spinal Cord Injury (ISNCSCI), previously known as the ASIA exam.

This intermediate to advanced level workshop will address:

1. Review of the 3 main components of the examination – motor, sensory and anorectal, including challenging aspects of the examination and recent changes
2. The ASIA Impairment Scale (AIS) for classification highlighting appropriate terminology
3. Challenging cases involving spinal cord injury level, severity, and classification.

Capabilities of the Upper Extremity Test (CUE-T) Course

This section of the workshop will provide clinicians training on the administration and scoring of the Capabilities of the Upper Extremity (CUE-T). The CUE-T is a spinal cord injury specific instrument and evaluates performance aspects of upper extremity function including unilateral, bilateral, proximal and distal functions.

This workshop will address:

1. Review each CUE-T examination item and the item intent
2. Provide training in conducting the CUE-T examination including equipment set up, procedure and directions to participant
3. Review CUE-T scoring for each item

This workshop will provide education and strategies to refine the participant's skills with administration of the ISNCSCI examinations and CUE-T.
