PRECOURSE

MAY 20, 2024

PRECOURSE 1

DME and Accessibility: The Essence for Maintaining Autonomy and Independence of People with a Spinal Cord Injury

A collaborative one-day workshop organized by three ASIA Committees (Americas, Rehabilitation Standards and Education) to enhance the knowledge of spinal cord injury care for any provider involved in the care of this patient population in the United States and abroad. We will share and expand on the knowledge and information available through the ASIA Durable Medical Equipment (DME) Guidelines publication. The target audience for this workshop includes both community providers (including but not limited to Physicians, PTs, OTs, and SLPs) who care for individuals with SCI both locally and around the world.

PRECOURSE 2

From Molecules to Movement – Scope, Utility, and Application of Biomarkers for SCI Clinical Trials and the Development of SCI Precision Medicine

Join us for an engaging SCOPE sponsored pre-course delving deep into the latest breakthroughs and cutting-edge contributions in the field of SCI biomarkers – from molecules to movement! Featuring compelling and thought-provoking presentations, this course is intended for clinicians, clinical and preclinical researchers at all career stages. Topics will range from current best research and clinical practices to novel insights into emerging biomarkers to shed light on the complex multi-system responses that follow spinal cord injuries. This course will explore a rapidly expanding field and its potential to significantly impact the design and execution of future clinical trials in spinal cord injury.
